

Ideation Phase

Brainstorm & Idea Prioritization

Date	04 February 2026
Team ID	LTVIP2026TMIDS82993
Project Name	HouseHunt: Finding Your Perfect Rental Home
Maximum Marks	4 Marks

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Problem Identification

During the team discussion, we identified that finding rental houses is often difficult due to:

- Lack of centralized property listing platforms
- Fake property advertisements
- No direct owner-renter communication
- Manual booking processes
- Lack of proper verification and management system
- Time-consuming house search process

Traditional methods like brokers and word-of-mouth create:

- Extra commission costs
- Delays in communication
- Limited property visibility
- No digital tracking

Selected Problem Statement

To develop a centralized web-based platform that connects property owners and renters, enabling secure property listing, browsing, and booking with role-based authentication and management.

Step-2: Brainstorm, Idea Listing and Grouping

During brainstorming, the team generated the following ideas:

Idea List

1. Online property rental system
2. Owner dashboard for property management
3. Renter dashboard for property search
4. Admin panel for monitoring users and properties
5. Secure login using JWT authentication
6. Role-based access (Admin, Owner, Renter)

7. Property image upload system
8. Property availability tracking
9. Booking management system
10. Search and filter functionality
11. Real-time availability updates
12. Mobile responsive UI

Grouping of Ideas

Authentication & Security

- User registration and login
- JWT token authentication
- Role-based authorization

Property Management

- Add property
- Update property
- Delete property
- View properties

User Management

- Admin managing users
- Role-based dashboard
- Owner-specific features
- Renter-specific features

Booking System

- Book property
- Track booking status
- Owner booking overview

Step-3: Idea Prioritization

After discussion and evaluation based on feasibility, impact, and technical complexity, we prioritized the ideas as follows:

High Priority Features

1. User Registration & Login
2. JWT Authentication

3. Role-based Access (Admin, Owner, Renter)
4. Owner Dashboard
5. Add Property Feature
6. View Owner Properties
7. Property CRUD Operations
8. API Integration (Frontend–Backend)
9. MongoDB Database Integration

Medium Priority Features

1. Booking System
2. Admin Panel for Monitoring
3. Property Availability Tracking
4. Property Status Updates

Future Enhancement Ideas

1. Payment Gateway Integration
2. Real-time Chat Between Owner & Renter
3. Email Notifications
4. Property Search Filters
5. Property Rating & Review System
6. Deployment to Cloud (AWS / Vercel / Render)
